EMMA Systems

EMMA is a young and diverse team of aviation innovators and software engineers that have observed how operational management platforms, including A-CDM, have been implemented so far: rigid, incomplete, and not always providing the benefits they were meant to bring.

In many cases, aviation has been locked into a proprietary solution that was never meant to address the most critical operational issues, nor any of the current and upcoming sustainability challenges. Hence, the many limitations in usability and ease of deployment, as well as the extremely costly change requests.

With EMMA Systems, we selected an open system that is used by the world's leading internet companies, allowing for full flexibility on all levels, with airports themselves in control of what they want to see, measure, and configure. We intend to make aviation operations more efficient and predictable and generate accurate forecasting using the most.

Vision

To be the leading provider of software solutions that revolutionizes the aviation industry by optimizing its operations and enhancing the overall experience for all stakeholders.

Mission

To empower the aviation industry with cutting-edge technology and innovative software solutions. We strive to continuously improve our products and services, and to deliver outstanding customer satisfaction, by fostering a culture of collaboration, creativity, and excellence.

Our Values

Leadership

We are the best in everything we do, we enable our people to be outstanding and we constantly challenge the status quo. By hiring the best-in-class colleagues, giving them all the means to excel and creating a solid basis to perform we want to be the best, most motivated and most flexible solution provider for airports worldwide.

Agility

We use technologies that are non-proprietary, offer the highest flexibility to be able to meet the integration of new data sources or applications in a matter of weeks and are easy to work with also by non-IT engineers.

Innovation

Passion

We are a team of enthusiastic aviation professionals that love the world of aviation and understand their role in making aviation more efficient, safe and sustainable.

Become a Partner

Let's write aviation history together

We work with the best-in-class partners to support our customers in their move to implement a new operational management approach, starting with defining the ideal operational management approach to the adaptation of the ConOps, training, and implementation of an Operational Management Plan.

Become a Partner

Become part of the EMMA Community

We work together with best-in-class application developers to create a true end-to-end approach to truly transform airport operations enhancing the overall performance of all airport stakeholders and the passenger journey. Interested in joining?
